Godin 5th Avenue Archtop Acoustic

■ Godin has released its 5th Avenue archtop acoustic guitar, which offers more projection and volume in the low to mid frequencies than traditional archtops.

The instruments are made from Canadian wild cherry, and the body of the 5th Avenue features a molded arched top and back, as well as an adjustable rosewood bridge, classic f-holes, contoured high-gloss headstock, floating pickguard, and cream binding.

Also, the guitar's custom polished finish was inspired by the French polish of the 19th century.
