### Godin A6 Ultra Semi-Acoustic

Canadian-based Godin Guitars has released a new edition to its A-series guitars: the A6 Ultra Semi-Acoustic.

The A6 Ultra combines the plugged-in acoustic sound with the feel of an electric neck. Its chambered body design eliminates feedback and the Godin humbucker in the neck position gives full tone. There is an EPM under saddle transducer, dual outputs, one for electric and one for acoustic, and a custom Godin preamp that allows the player to control their tone via sliders for acoustic volume, treble, mid, and bass. There are also independent controls for the electric humbucker volume, treble, and bass.

This semi-acoustic features a solid cedar top, a two-chambered silver leaf maple body, mahogany neck, and Indian rosewood fingerboard. It comes in three finishes: Natural SG, Black HG, and CognacBurst HG.
